

# Filling your needs

Philips UltraFill home oxygen system – unique capabilities help you to cost-effectively treat your mainstream and high-usage oxygen patients

**PHILIPS**  
  
sense **and** simplicity

# UltraFill meets the

# At demand

UltraFill is an advanced home oxygen system that combines a stationary oxygen concentrator, filling station, and high-capacity cylinders to meet the needs of a wide range of oxygen patients, including those who are highly active or require continuous flow oxygen. UltraFill also has the needs of your business in mind with features intended to save you money by using existing inventory and lowering your operating costs.

## Filled with cost saving features

UltraFill's unique design and high-capacity 200 bar cylinders provide a number of ways to reduce your costs while offering patients the exceptional oxygen duration and convenience of the UltraFill home oxygen system. UltraFill cylinders are filled to 200 bars and hold approximately 35% more oxygen than if they were filled to 140 bars. Your patients will require fewer cylinders and gain in autonomy. Plus, the UltraFill system generates oxygen and fills cylinders right in the home, eliminating recurrent oxygen deliveries.

The UltraFill system also allows you to leverage your current inventory of Philips Respironics concentrators, which may help to reduce the overall acquisition cost.

After an upgrade of your EverFlo, Millennium M600 and M605 inventory, you will be ready to fulfill your patients' needs with our home oxygen system.

UltraFill's low-maintenance design may lead to lower service costs for additional savings. Finally, UltraFill's intuitive design makes it a snap for your patients to use.

## The benefits are continuous

UltraFill home oxygen system allows your patients the ability to fill tanks and receive oxygen therapy simultaneously.<sup>1</sup>

There is no need for the patient to switch to another device during the filling process.

### The 200 bar advantage

The ability to fill cylinders to 200 bar provides high usage oxygen patients with the freedom to enjoy more time away from home to do the things they want.

UltraFill's 1 or 2L cylinders are equipped with integrated regulators or conservers that help meet the expectations of both high usage and continuous flow patients. These lightweight aluminum cylinders provide patients with 35% percent more oxygen than cylinders filled at 140 bar.

This unique feature allows patients to gain more autonomy with longer lasting and lighter cylinders, thus offering an ideal solution for both continuous and pulse flow patients.

# ity for greatness

## Patient-friendly design

- One-handed cylinder connect/disconnect
- Patient can stop and restart filling at their convenience
- Low noise level: 44dBA
- Cylinders can be topped off to make partial fills
- Low power consumption: 110W
- Fill level indicator monitors cylinder fill level

# Find more freedom

The UltraFill home oxygen system is part of the Freedom Series of oxygen products from Philips Respironics, an entire family of products designed to deliver more freedom – freedom from worry, freedom from discomfort, and freedom from complicated maintenance.

UltraFill specifications	
Dimensions (l x w x h):	229 mm x 508 mm x 648 mm
Weight:	45 lbs (20.4 kgs)
Sound level:	44 dBA
Power consumption:	110 watts
Cylinder type:	200 bar
Typical filling time:	1L : 122 min (2 hr 02) 2L : 244 min (4 hr 04)
OCD/regulator type:	Integrated
Patient flow while filling:	<3 LPM with EverFlo or Millennium M5
Oxygen concentration:	93% (+/- 3%)
Compatible concentrators:	EverFlo, Millennium M5
Storage/transport humidity:	15 to 95% non-condensing
Operating altitude:	0 to 7,500 feet (0 to 2286 m)
